The purpose of this class is to enrich and deepen your understanding of the material in Calculus I. Even though no credit hours are assigned, the expected workload will be the equivalent of a one-hour class. Several (approximately five) projects will be assigned. Some of the projects will be done individually, while others will be group efforts. Some classes will be spent discussing or presenting information about the projects. At times, students may be required to present work to the class at the blackboard. For other classes, I will simply lecture on additional or supplemental topics.

The grading for this class is just pass or fail. The grade you receive will be based on two components.

The first component of your grade will be your performance on the projects. You do not necessarily need to correctly solve the problems which are posed, but you do need to show that you put appropriate effort into doing so. I will let you know individually if the situation arises that one of your projects does not indicate that you exerted sufficient effort. So, if I don’t contact you then you can assume that your performance is satisfactory. If necessary, I will allow a student to make up one unsatisfactory project, but a lack of effort on two or more projects will mean that you will not pass the class.

The second component of your grade will be attendance. I will call a roll at the beginning of each class. If you must miss a class for some pressing reason, let me know beforehand if at all possible. If you miss a class because of an unforeseen emergency, then contact me as soon afterward as you can. In either case, I will give you a short (approximately one-hour) assignment to complete in order to make up the missed class. You cannot pass the class if you have any absences which are not made up.

Students with a disability should be aware that the Office of Disability Services is available for their assistance. The office is located in room 112 of the University Center. The phone number is 372-6119.
